

Developing CCI Web Pages

Document Author: arho.virkki@tyks.fi

Add ssh key for easier access (the password is stored under Common/webserver/ folder in the Common Git repository).

```
sh-copy-id -i ~/.ssh/id_rsa.pub www@185.87.108.219
```

Clone the Git repository

```
git clone www@185.87.108.219:/opt/git/ktp_website.git
```

Start a local web server for development

```
cd ktp_website  
python3 -m http.server
```

Point your browser to *http://localhost:8000*

Once done with changes, commit them to git

```
git add <the files>  
git commit -m "my changes"  
git push
```

Finally, synchronize the ktp_website directory at the server

```
ssh www@185.87.108.219 "cd ktp_website; git pull"
```
